

1. Obtain Compiler gcc

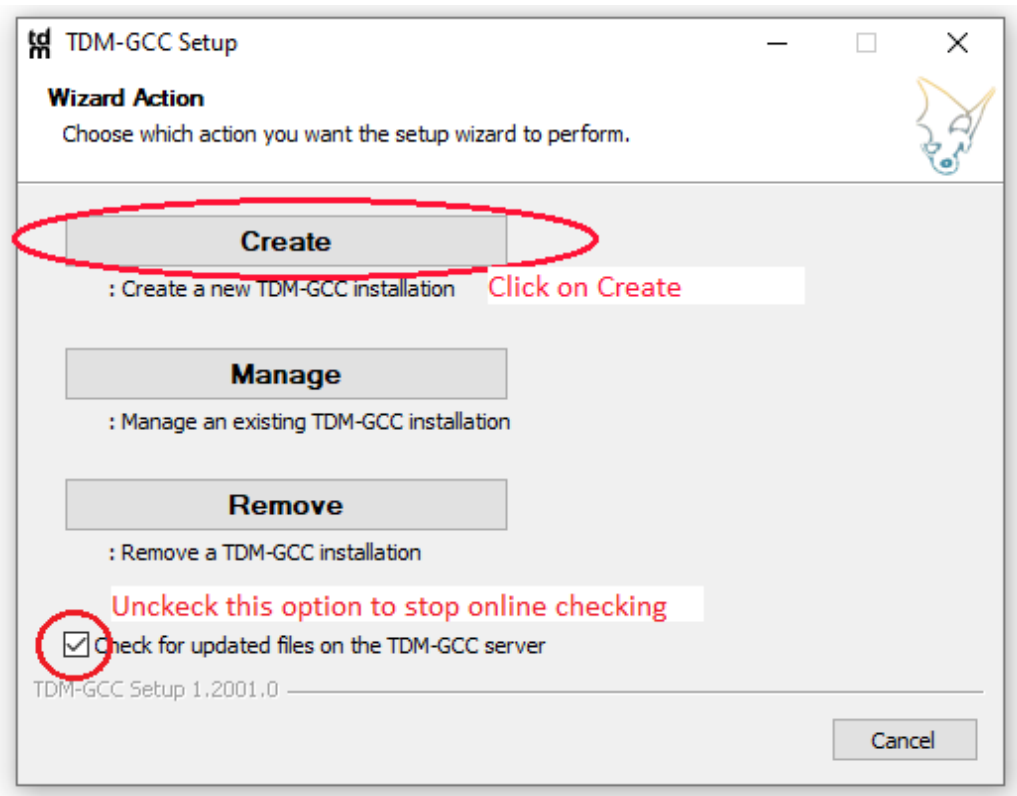

Visit - https://drive.google.com/drive/folders/1108GABGDuSIXqvAO1b0d3_4BBM7jGiBg?usp=sharing

Download Executable file of Compiler (tdm-gcc-9.2.0)

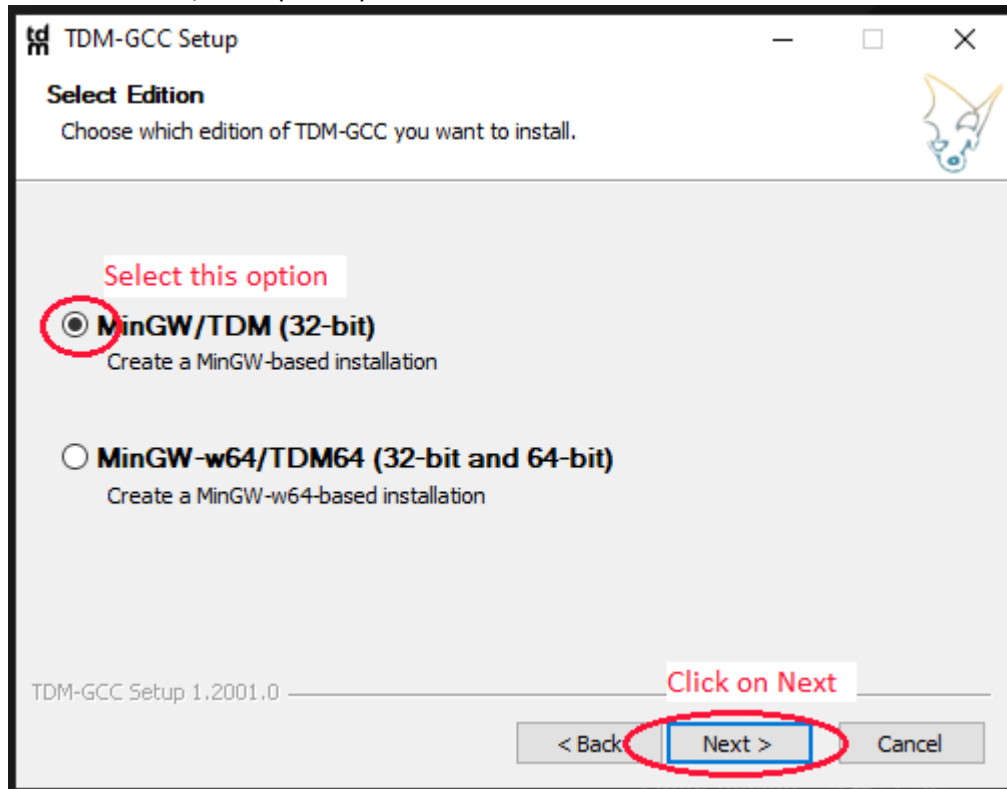

1. Installation steps for compiler (gcc)

- 1.1 Double click on downloaded executable file.
- 1.2 Click on Yes to install it.
- 1.3 Click on Create and uncheck option for online updates

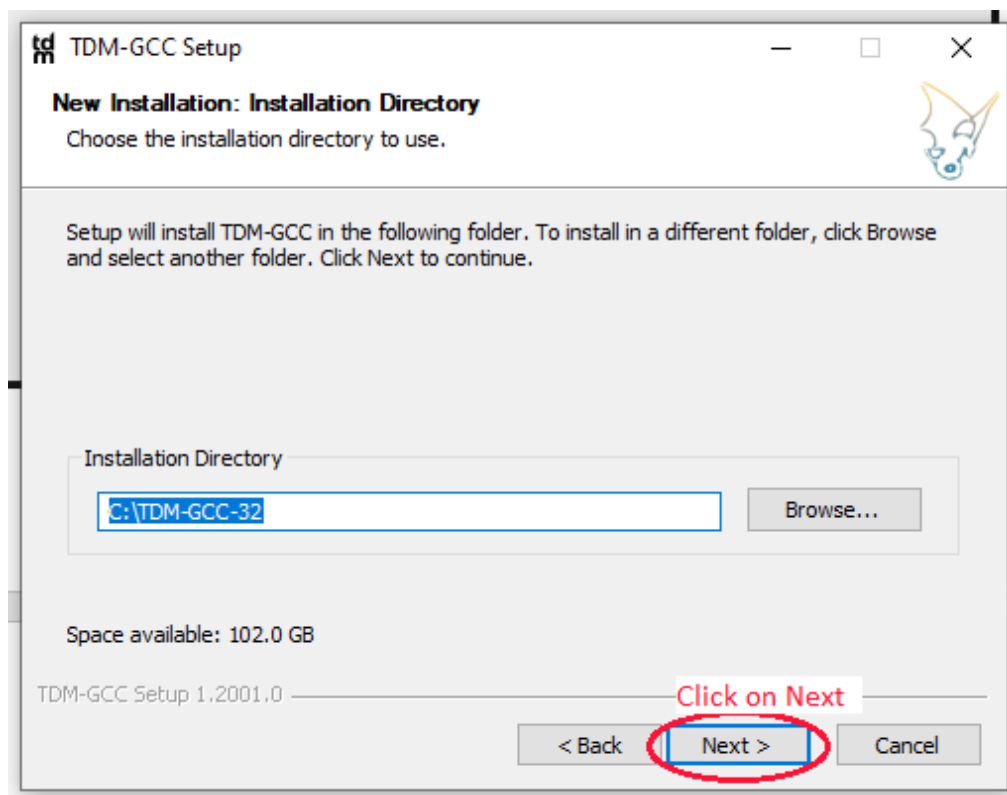

Sunbeam – PreCAT Installations

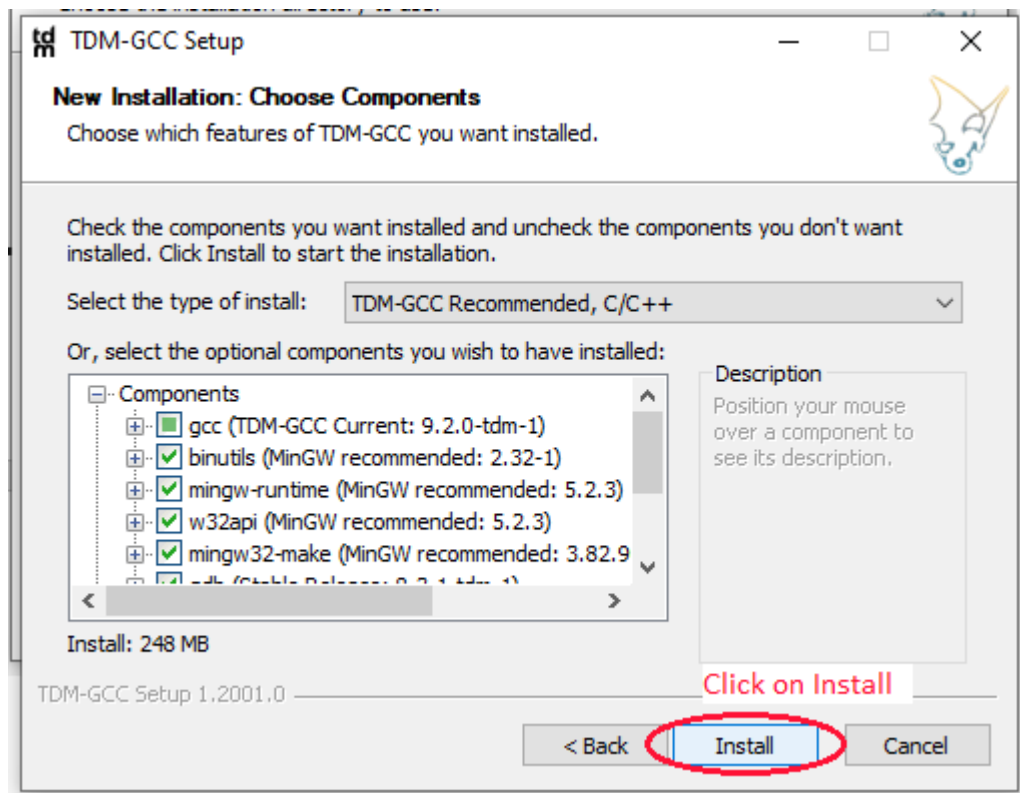

1.4 Select MinGW/TDM (32 bit) and click on Next

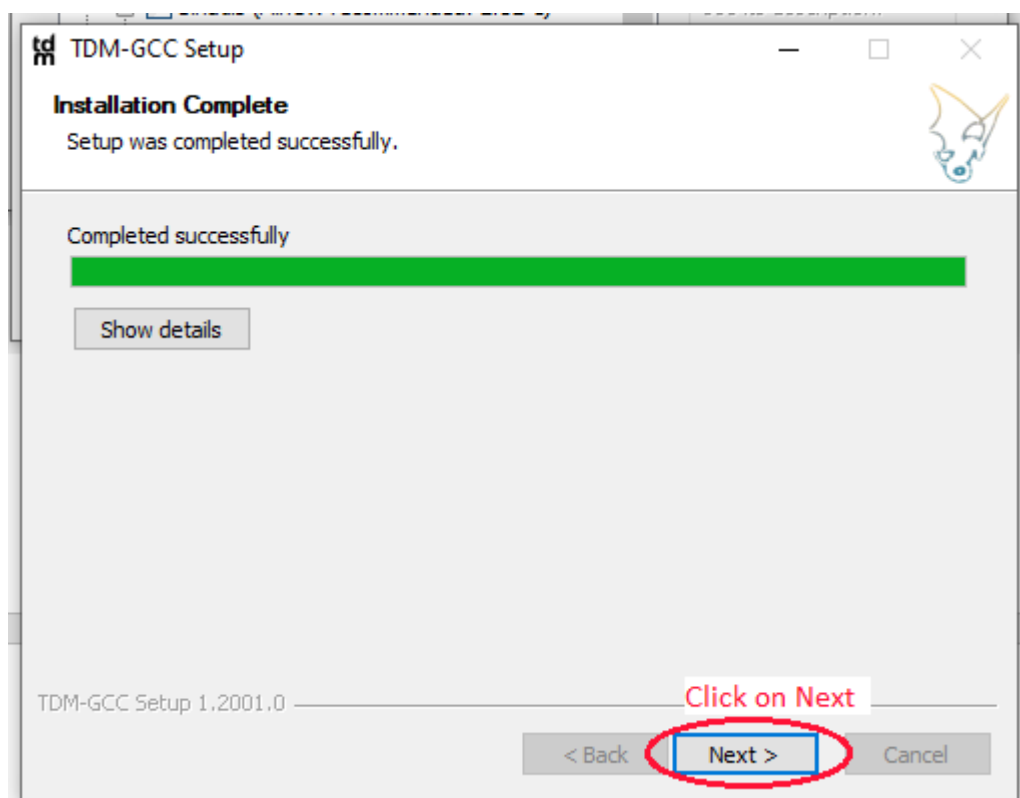

1.5 Click on Next

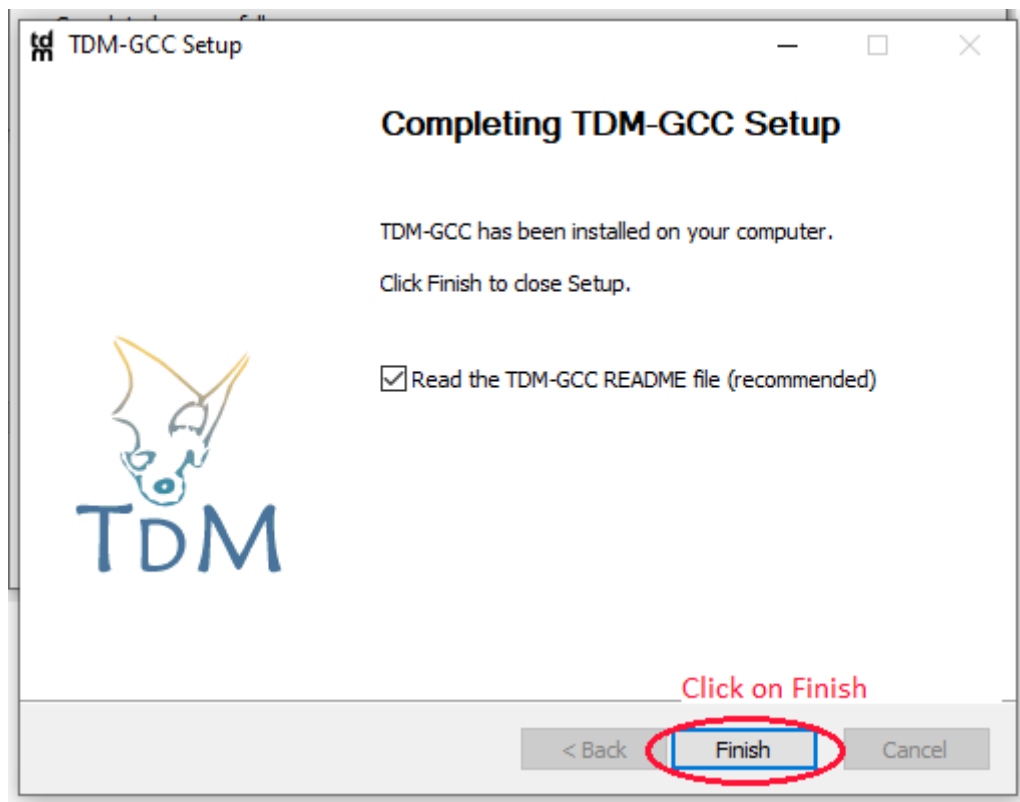

1.6 Click on Install

1.7 Click on Next

1.8 Click on Finish

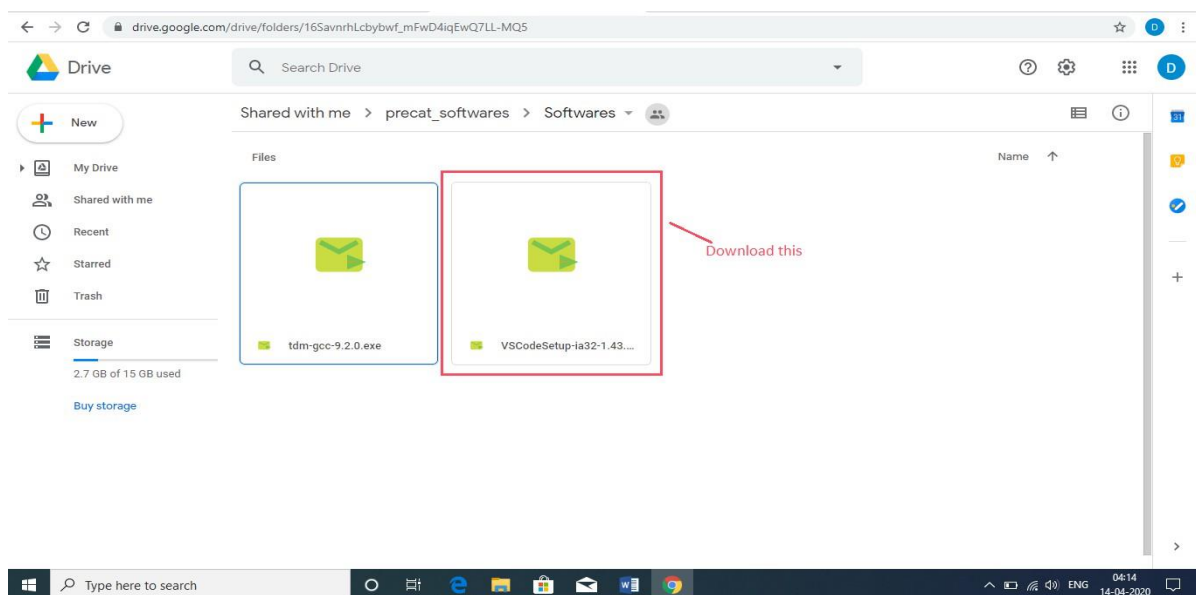

Now your compiler is ready to use.

2. Obtain Visual Studio Code

Visit - https://drive.google.com/drive/folders/1108GABGDuSIXqvAO1b0d3_4BBM7jGiBg?usp=sharing

Download Executable file of Visual Studio Code (VSCodeSetup-ia32-1.43.2)

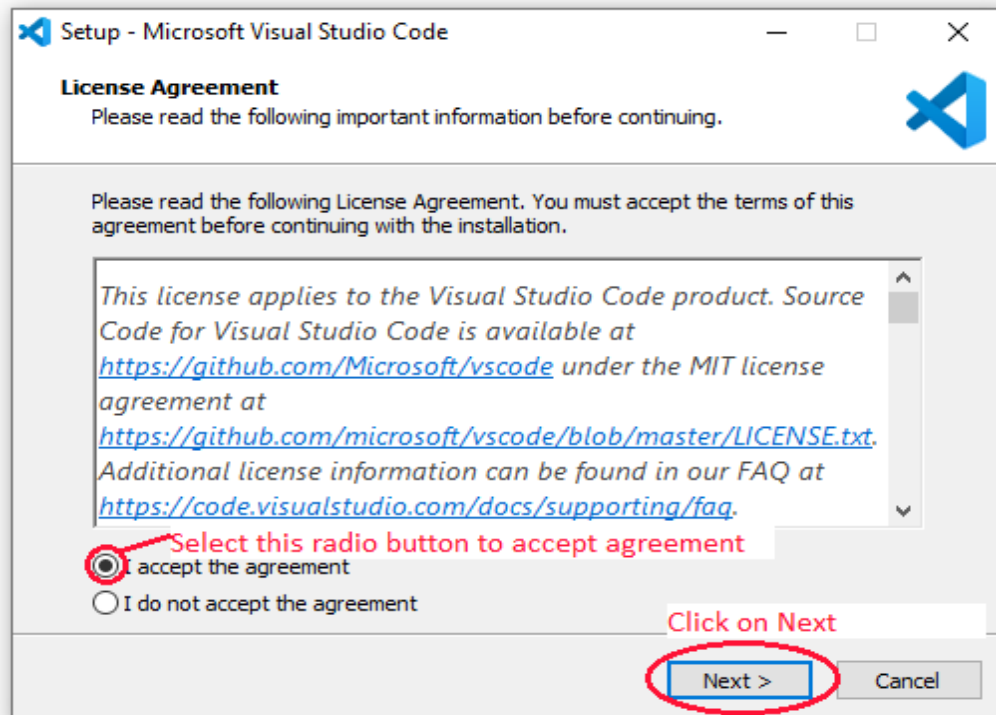

3. Installation steps for Visual Studio Code

You will get an executable file of Visual Studio Code, now it's time to install it.

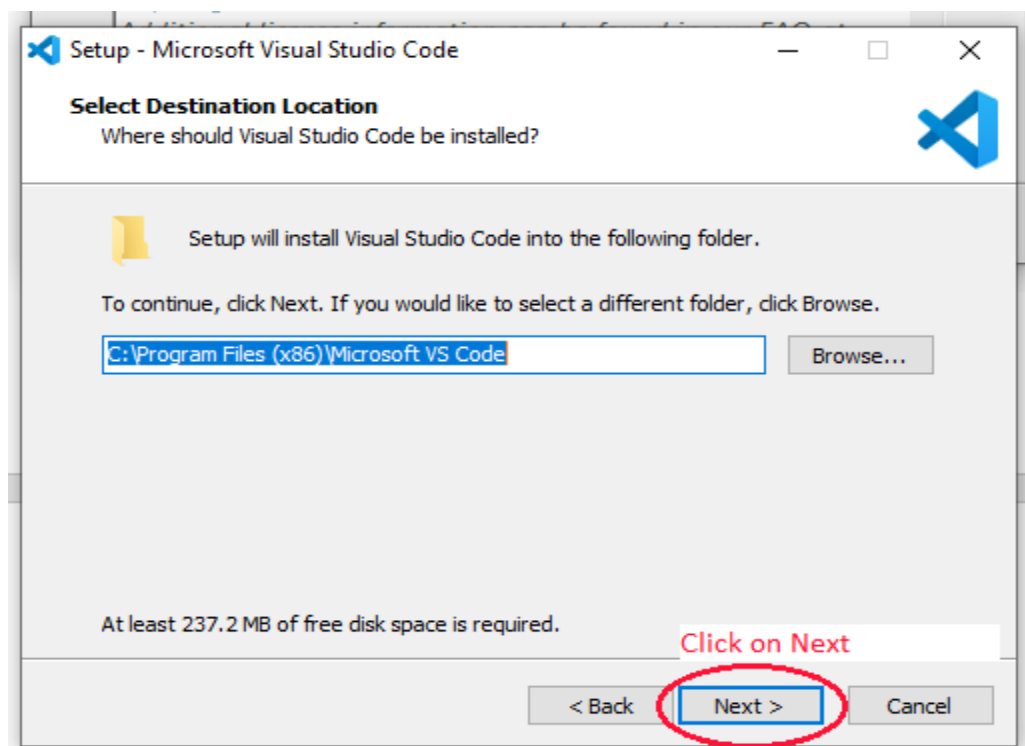

3.1 Double click on downloaded file

3.2 Click on Yes to install it

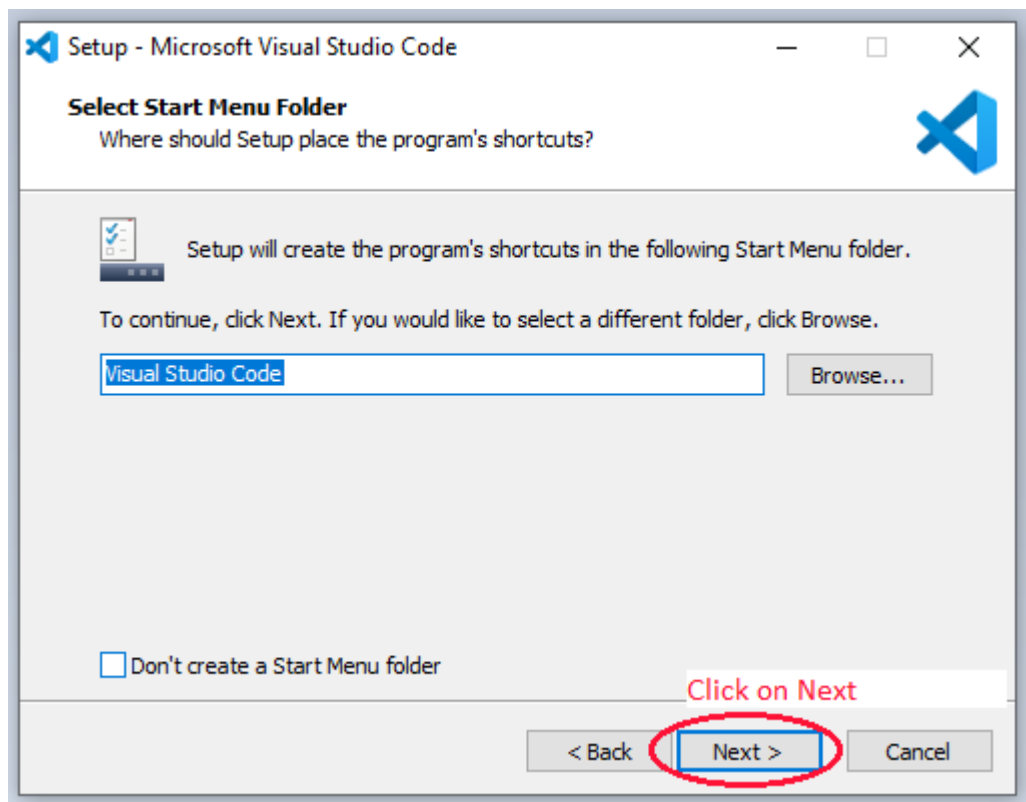

3.3 Accept Agreement and click on Next button.

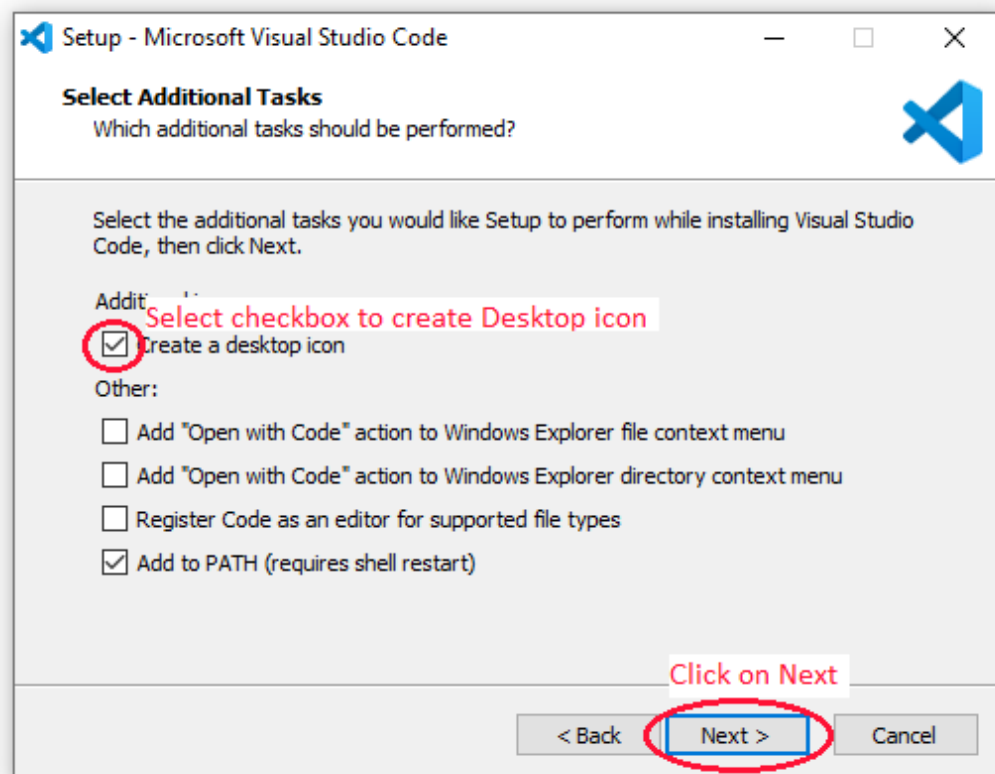

3.4 Click on Next

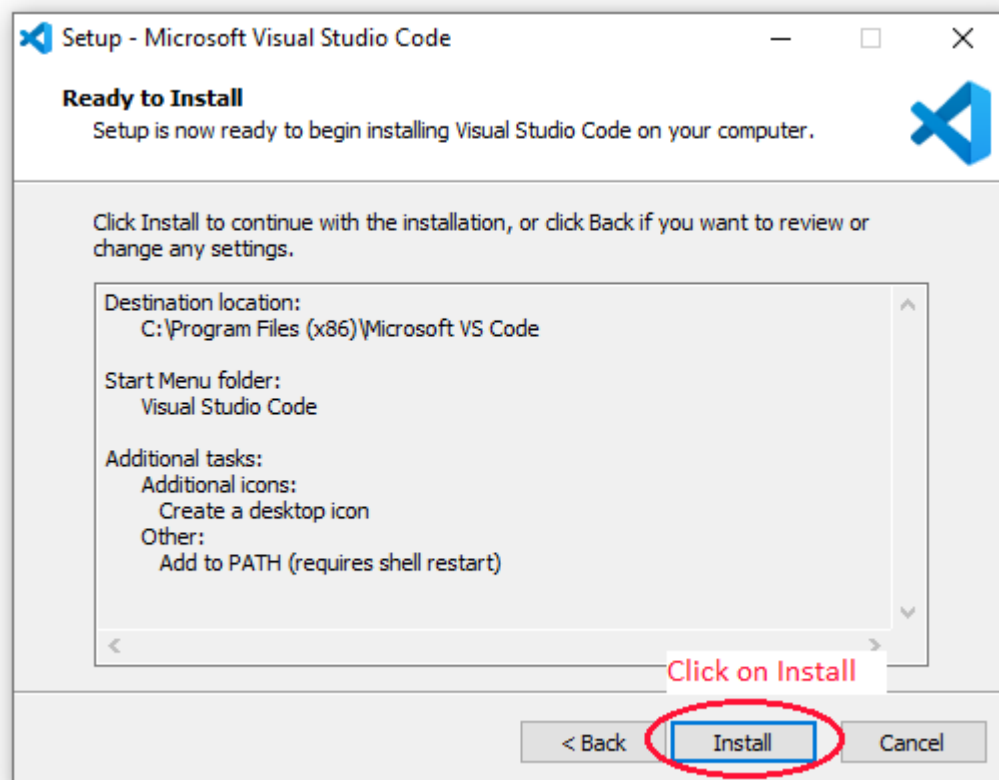

3.5 Click on Next

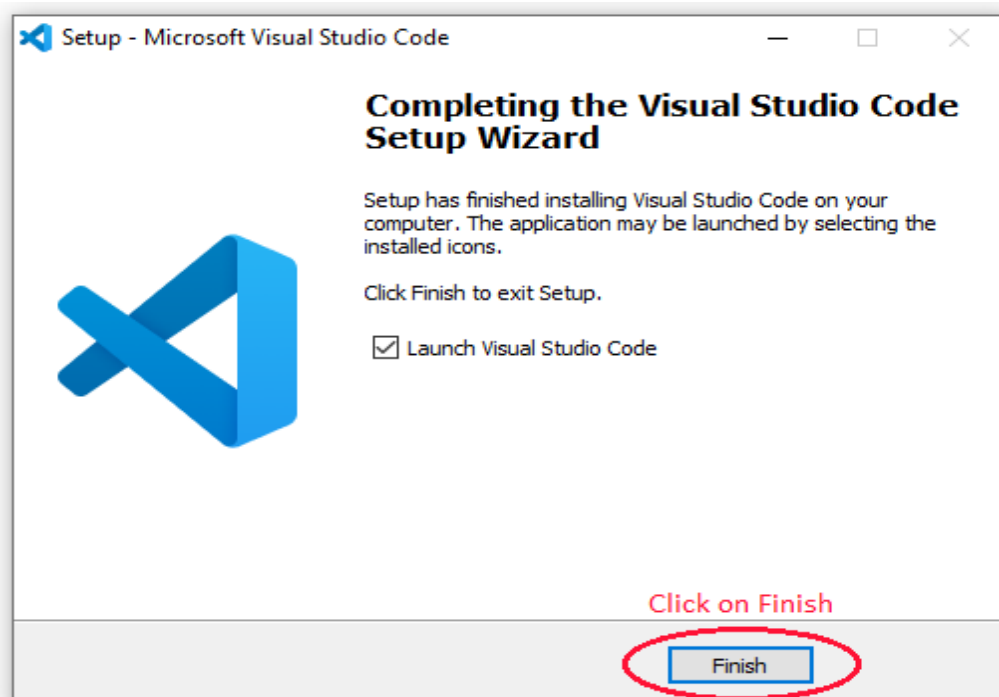

3.6 Select checkbox to create Desktop icon and click on Next

3.7 Click on Install

3.8 Click on Finish

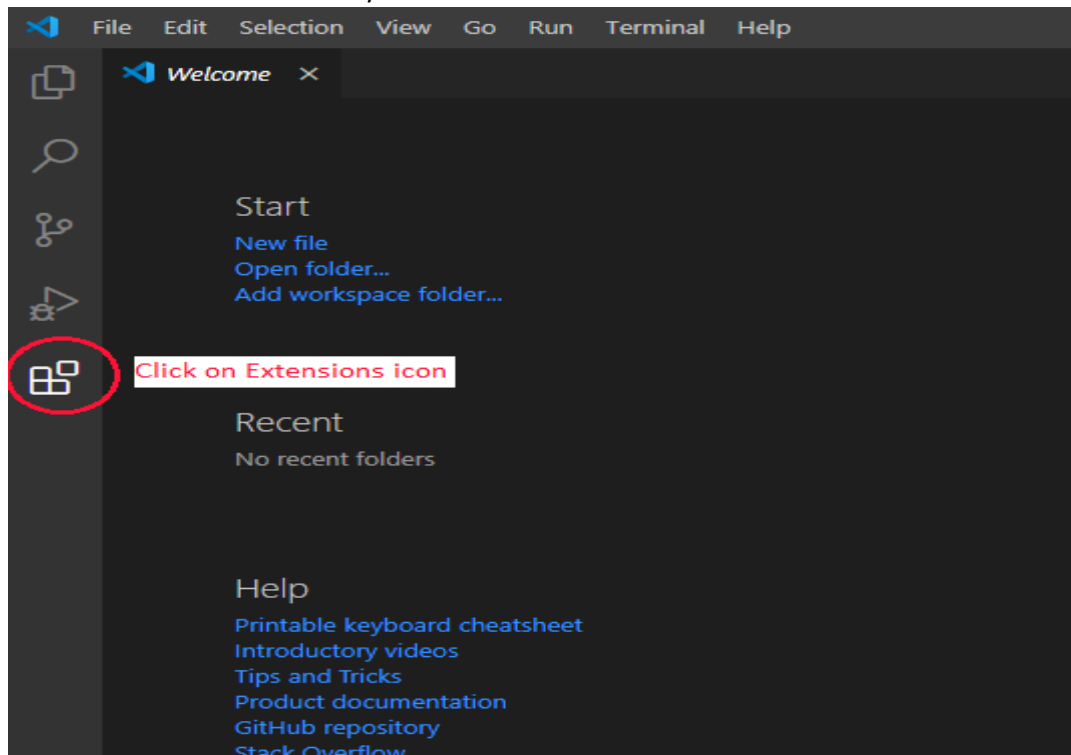

On your Desktop Visual Studio Code shortcut is created. Every time double click on this icon to open Visual Studio Code.

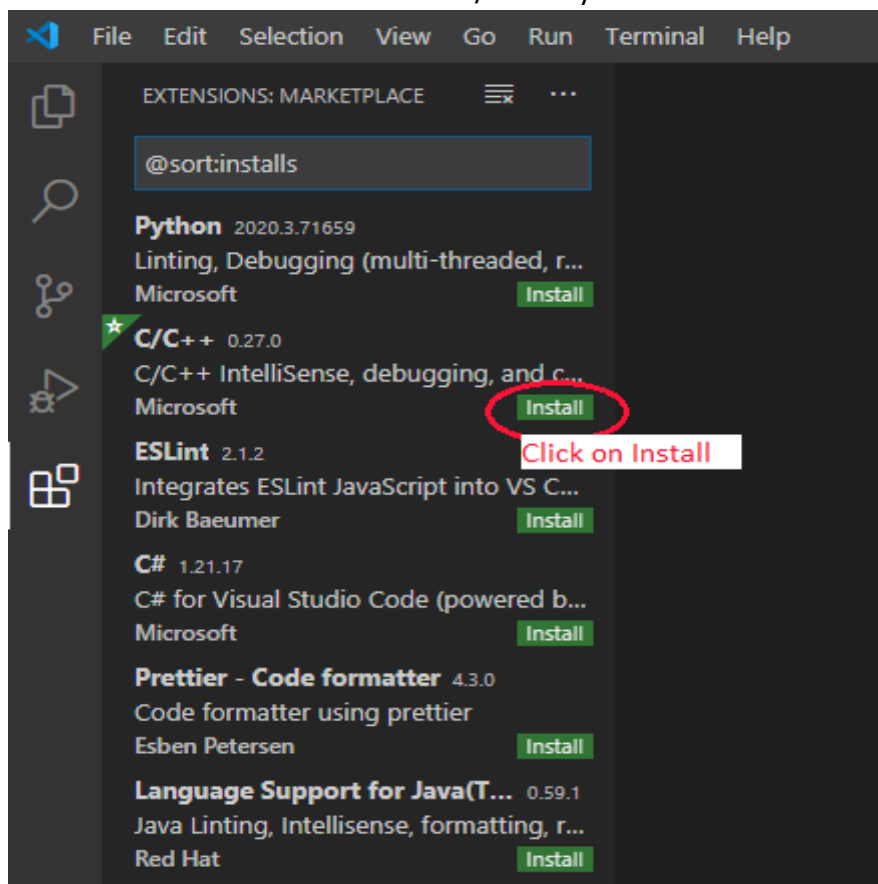

4. Configuration Steps for Visual Studio Code

4.1 Open Visual Studio Code. You will get a welcome window

4.2 Click on Extensions to add C/C++ extensions to VS Code

4.3 Click on Install to add extension of C/C++ to your editor.

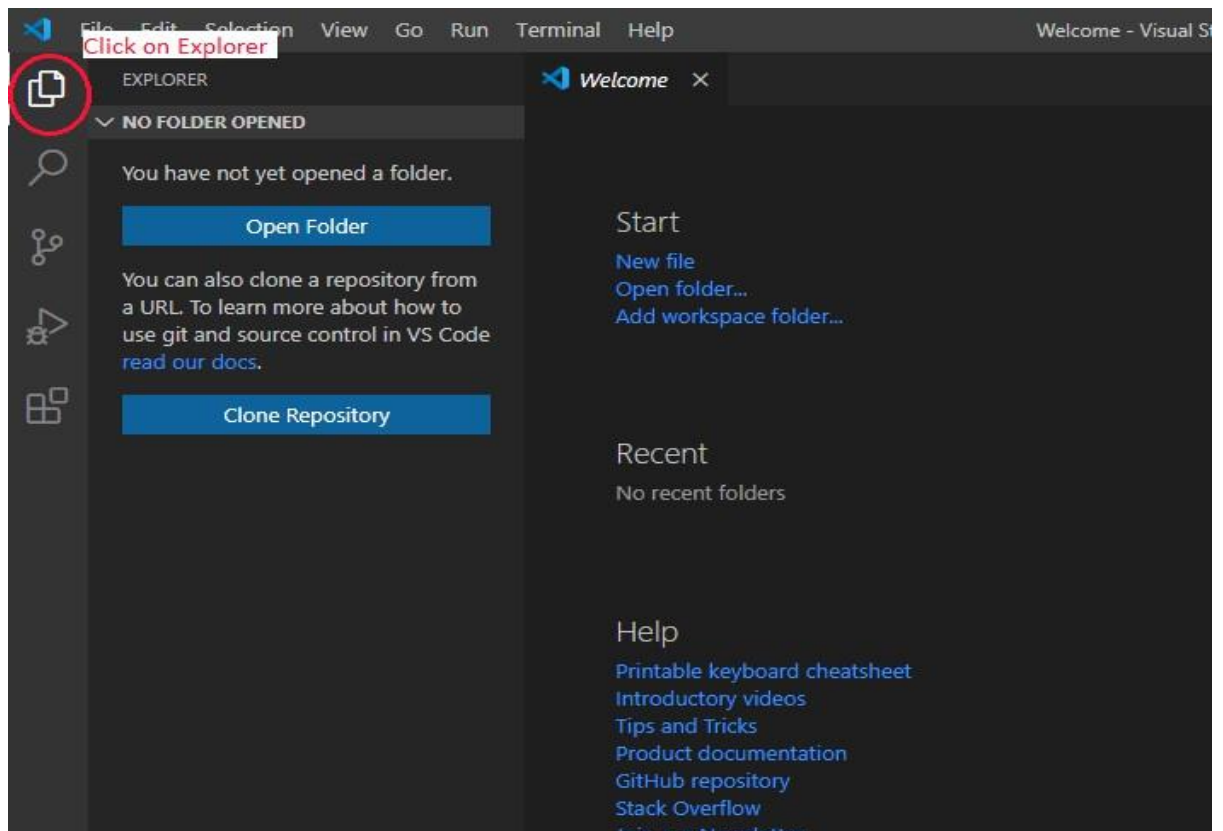

Now close your VS Code and your VS code is ready to do C programming

5. How to do Hello World Program in Visual Studio Code

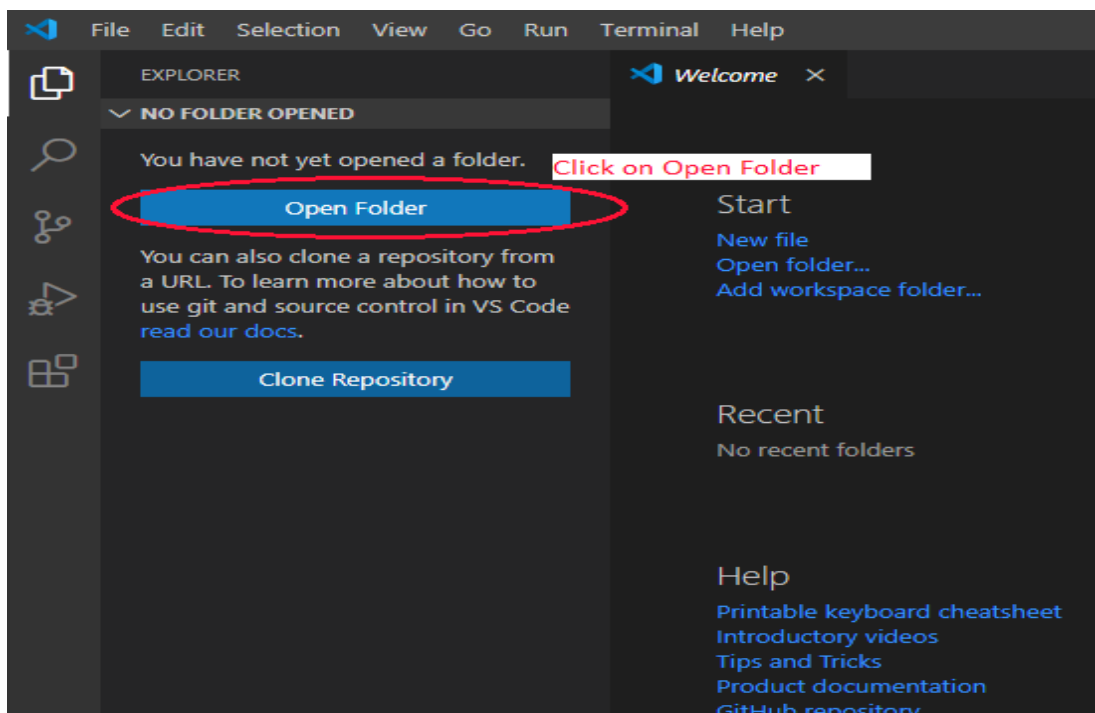

5.1 Open Visual Studio Code

5.2 Click On Explorer

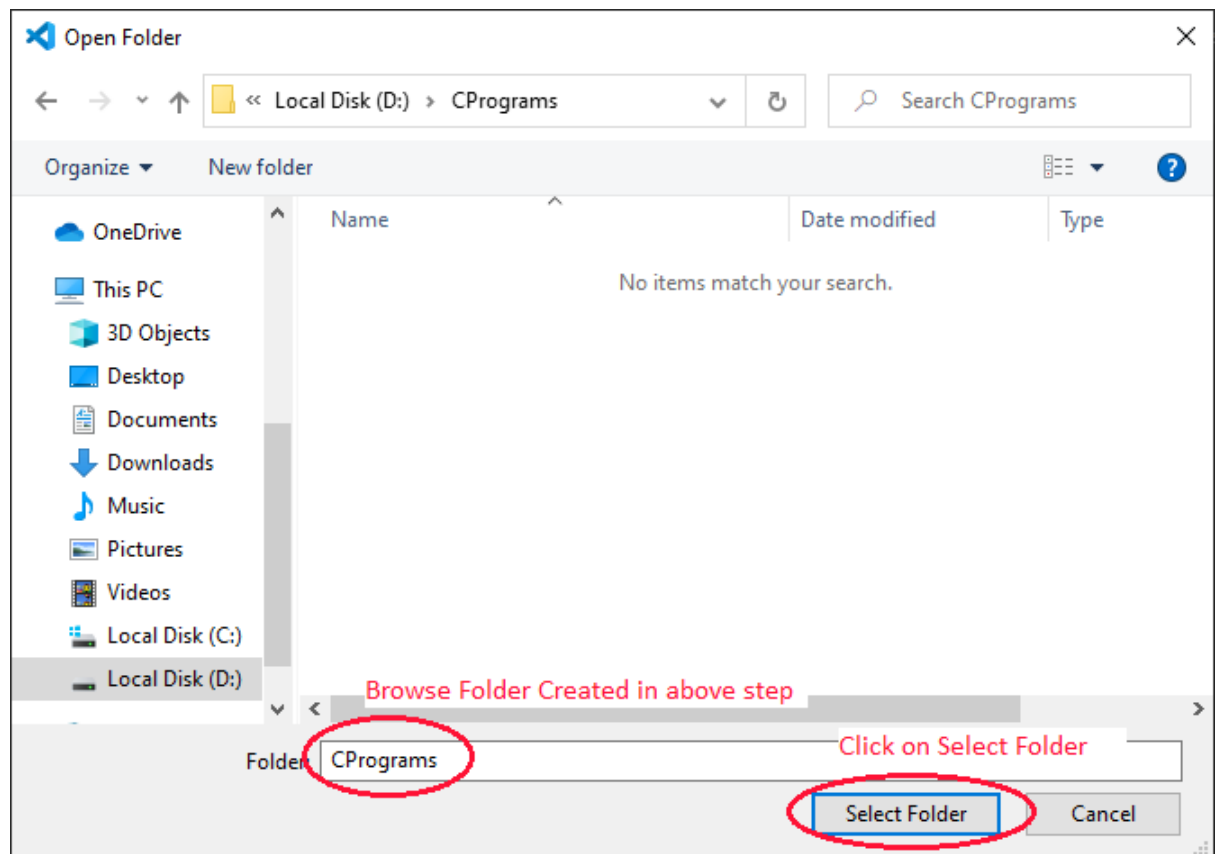

5.3 Create one folder in your D:/ drive to store your C programs with name "CPrograms".

5.4 Click on Open Folder

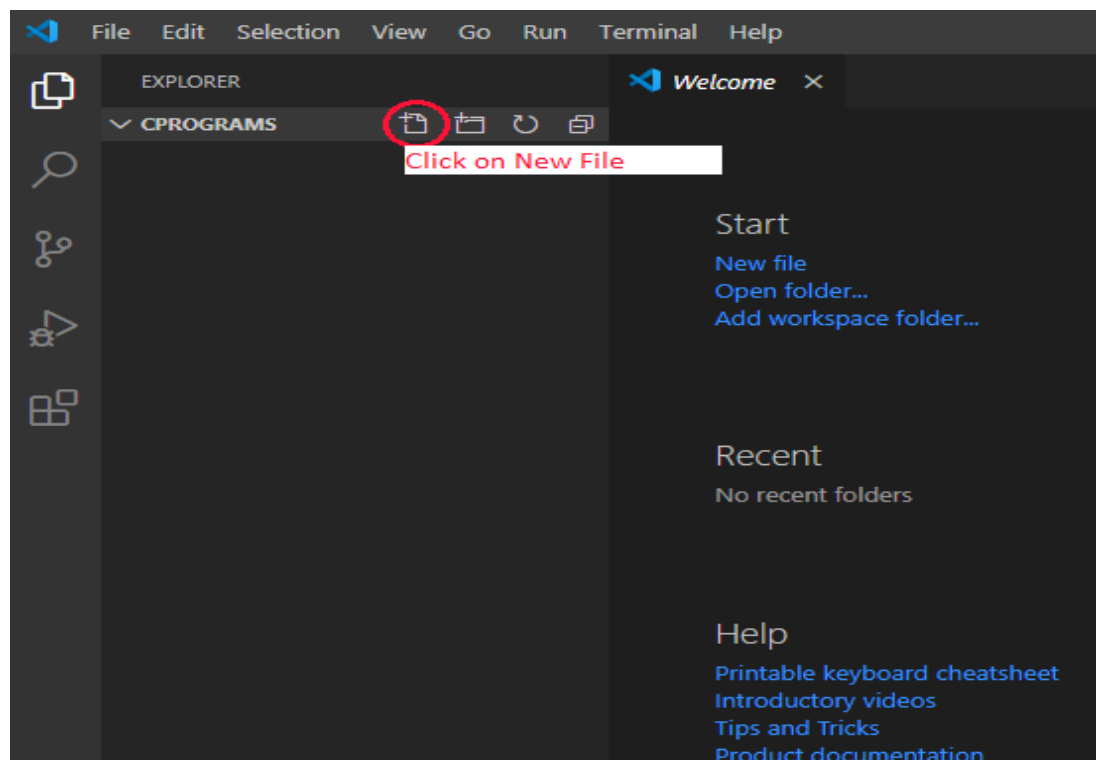

Sunbeam – PreCAT Installations

5.5 Browse Folder which is created in previous step 6. 3 and click on select Folder

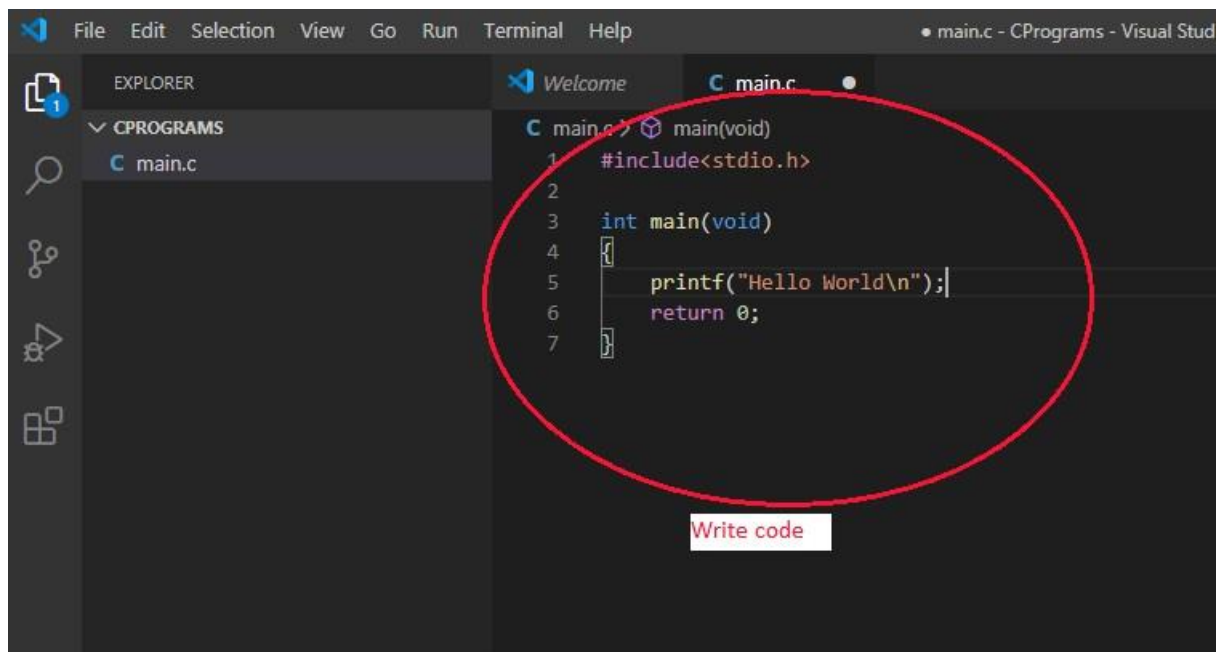

5.6 Create new .c file and give name “main.c”

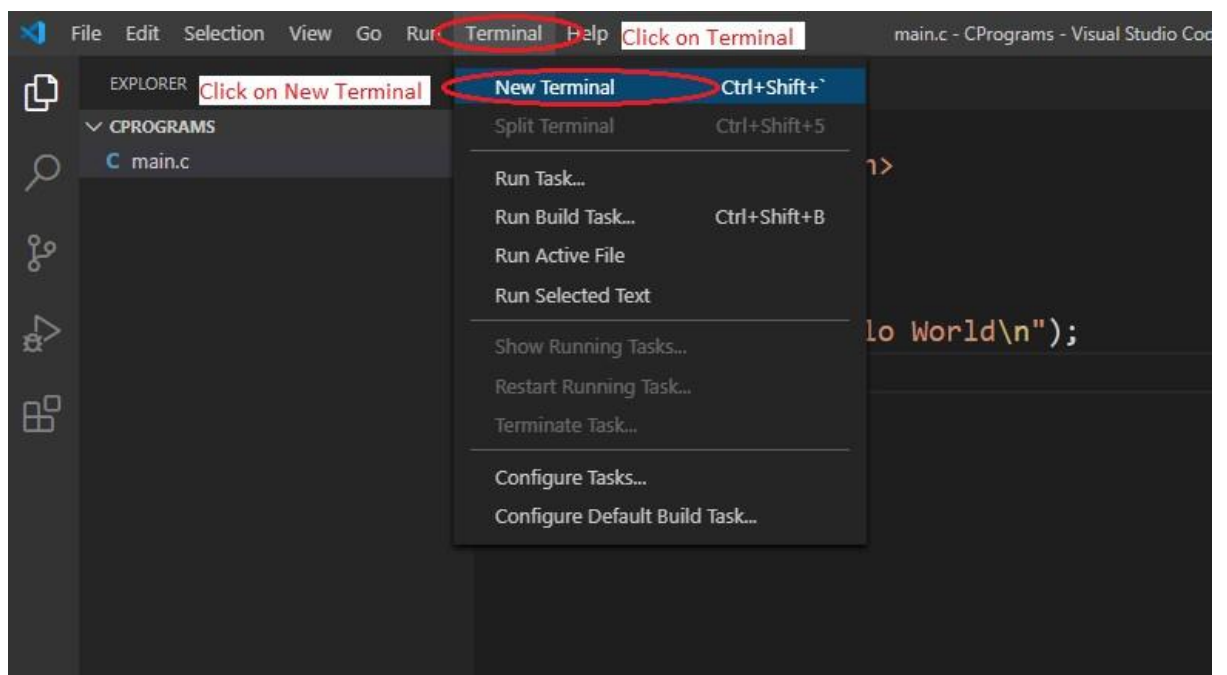

Sunbeam – PreCAT Installations

5.7 “main.c” file will be opened into editor. Write below mentioned code into file and save it.

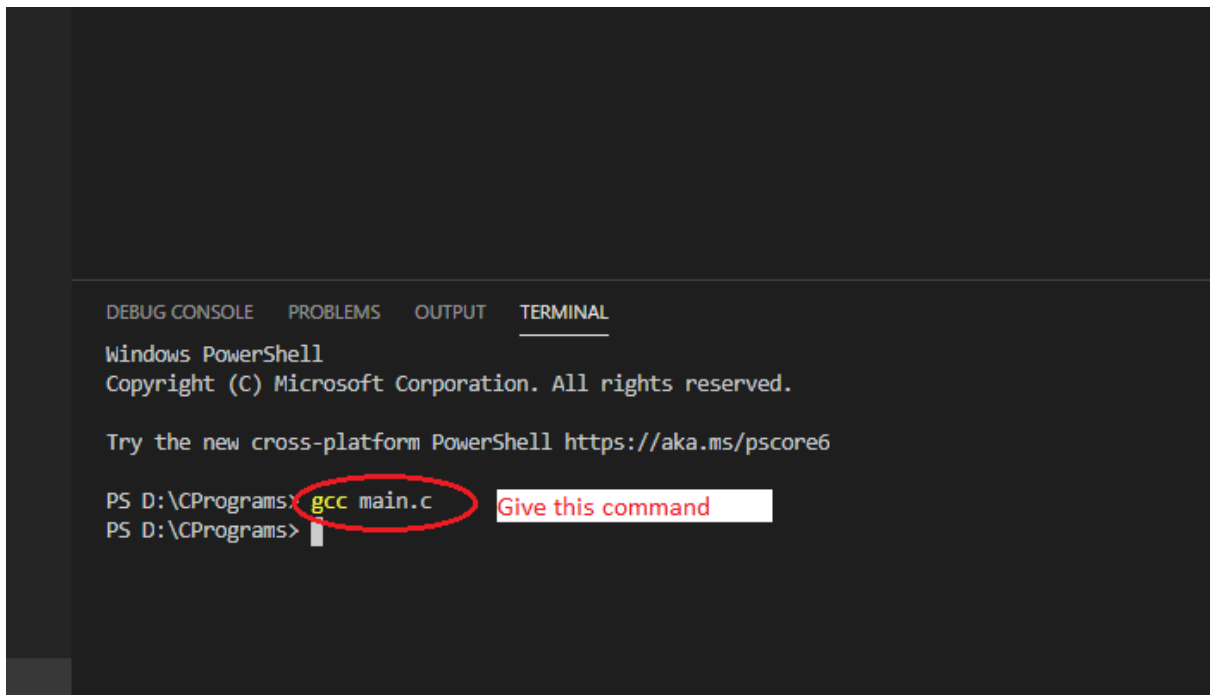

5.8 Click on Terminal option and click on New Terminal

Sunbeam – PreCAT Installations

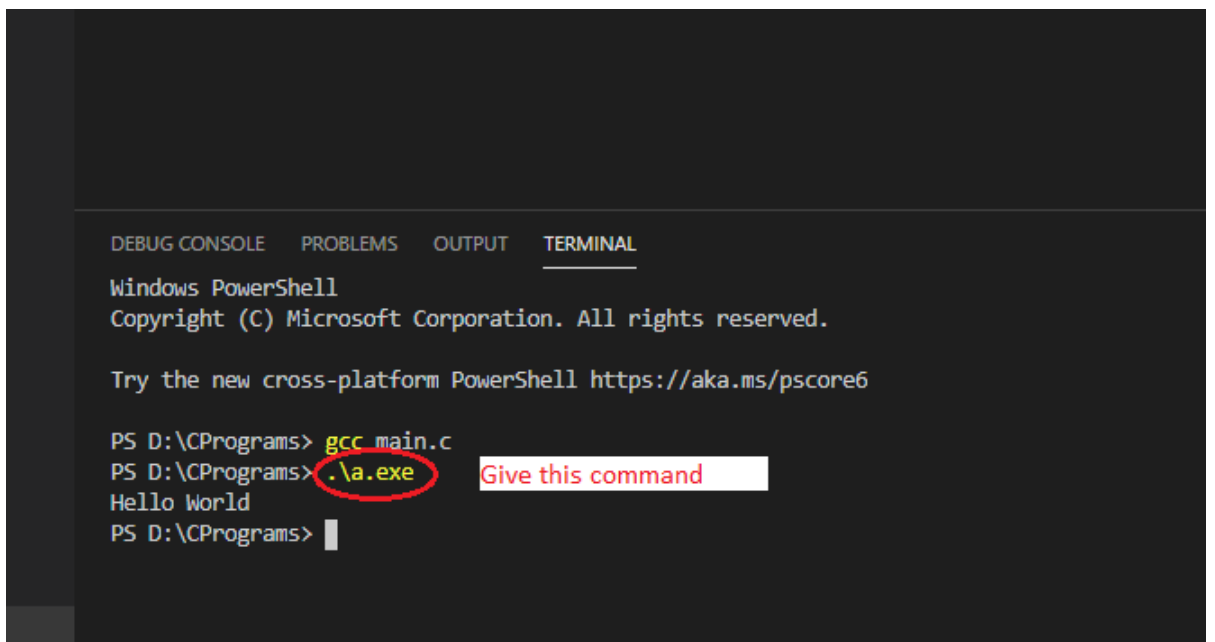

5.9 Give command “gcc main.c” to compile your C program

A screenshot of a Windows PowerShell terminal window. The window has a dark background with a light blue header bar. The header bar contains the text "DEBUG CONSOLE PROBLEMS OUTPUT TERMINAL" in white, with "TERMINAL" underlined. Below the header bar, the text "Windows PowerShell" and "Copyright (C) Microsoft Corporation. All rights reserved." is displayed in white. Below this, the text "Try the new cross-platform PowerShell https://aka.ms/pscore6" is displayed in white. The terminal shows the command prompt "PS D:\CPrograms>" followed by the command "gcc main.c" in yellow, which is circled in red. To the right of the command, a white box with the text "Give this command" in red is visible. The terminal also shows the command prompt "PS D:\CPrograms>" followed by a cursor.

a.exe will be created in your folder.

5.10 Give command “.\a.exe” in same terminal to run your program

A screenshot of a Windows PowerShell terminal window. The window has a dark background with a light blue header bar. The header bar contains the text "DEBUG CONSOLE PROBLEMS OUTPUT TERMINAL" in white, with "TERMINAL" underlined. Below the header bar, the text "Windows PowerShell" and "Copyright (C) Microsoft Corporation. All rights reserved." is displayed in white. Below this, the text "Try the new cross-platform PowerShell https://aka.ms/pscore6" is displayed in white. The terminal shows the command prompt "PS D:\CPrograms>" followed by the command "gcc main.c" in yellow. Below this, the command prompt "PS D:\CPrograms>" is followed by the command ".\a.exe" in yellow, which is circled in red. To the right of the command, a white box with the text "Give this command" in red is visible. Below the command, the text "Hello World" is displayed in white. The terminal also shows the command prompt "PS D:\CPrograms>" followed by a cursor.
